

Bonus Assignment 1: Reflection #1

COSC 1100 – Intro to Programming

General Requirements

1. This assignment is to be completed **individually**. It is a **personal** reflection.
2. Analyze your work and progress in this course over the first 7 weeks. Consider what **challenges and victories** you had, as well as **work-related and personal growth**.
3. Prepare a **2- to 4-minute video** or audio recording that details your reflection. Videos longer than 4 minutes will only be watched up to the 4-minute mark.
4. This is a **bonus assignment** that can contribute up to **2%** to your overall mark.

Specific Requirements

For this assignment you will prepare a personal reflection on the work you have completed over the first 7 weeks of this course. You will then create a short video or audio recording of yourself presenting your reflection. It does not need to include any presentation materials such as slides. The recording could be done with your phone, or your laptop (possibly using MS Team) or other recording equipment to which you have access. It should not be a complicated production; the entire assignment may reasonably take you fewer than 10 minutes with some careful thought.

Your reflection will provide personalized answers to the prompting questions below regarding your work so far this term. This will be about you, not your group members or the class in general, except how it affects your personal work and growth.

The Prompt Questions:

- What were your biggest success and failures from the first half of term? What did you learn from them?
- What resources did you use that were the most valuable to you as a learner? What made them valuable?
- Over the last 7 weeks, how have you grown as a programmer and as a person? What growth do you still look forward to?

Your recording should only be a maximum of 4-minutes long. If your recording is longer than 4 minutes, your instructor is only obligated to observe the first 4 minutes. It does not need to be the full 4 minutes but if it is shorter than 2 minutes, you may want to consider adding more detail to your reflection.

It is preferred that you export any videos to the .mp4 format (default for most videos) or audio to the .mp3 format. Other formats may also be accepted as long as your professor is easily able to view/open them.

If you lack other tools for producing recorded content, note that Microsoft Teams can be used to produce recordings of reasonable quality.

Grading

Grading will be based on providing a clear, personal answer to each of the three prompting questions worth 0.5% each, and 0.5% for completion with reasonable quality audio and/or video.
